

Unseen #1 – Amazon Rainforest

The Amazon Rainforest is like the world's big garden. It has many kinds of plants, animals, and bugs. Dr. Maria and her team of scientists go there to learn more about this amazing place.

They look at tall trees and try to spot rare animals like jaguars. They also meet people who have lived in the forest for a very long time. These people teach them about using plants as medicine and how to live without hurting the forest.

But the Amazon is in danger. People are cutting down too many trees and harming the land. Dr. Maria and her team take notes on this to help save the forest.

One big problem they find is that many animals are losing their homes because of the tree cutting. This is bad not just for the Amazon, but for the whole world. The trip ends with everyone wanting to do more to keep the forest safe.

Answer the following questions

1. What is the Amazon Rainforest like?

2. Who is Dr. Maria?

3. What do the scientists want to learn?

4. What are people doing that is bad for the Amazon?

5. What big problem did the team find?

6. How did the trip make the team feel?

Answers with Notes

1. The Amazon Rainforest is like the world's big garden.

Mentioned in the first paragraph.

2. Dr. Maria is a scientist who leads the team.

Mentioned in the first paragraph.

3. The scientists want to learn more about the Amazon's plants, animals, and how to protect it.

Mentioned in the first and second paragraphs.

4. People are cutting down too many trees, which is bad for the Amazon.

Mentioned in the third paragraph.

5. The big problem is that many animals are losing their homes because of the tree cutting.

Mentioned in the fourth paragraph.

6. The trip made the team want to do more to keep the forest safe.

Mentioned in the fourth paragraph.
